

BIBLE & SCIENCE

An interdenominational group from Worcester's local churches'

Seminars on Science and the Christian Faith

We live in a world dominated by scientific discovery and new knowledge. Much of what science uncovers about our universe leads to new knowledge about areas once considered unfathomable - areas once thought to be the preserve of religion, such as human moral behaviour and human origins.

Is it still possible to believe in God in the light of all this scientific discovery? And where does Jesus fit? Not many authorities, whether in science or theology, have given enough thought to the nitty gritty of how these two subjects relate to each other. The seminars we offer try to fill this gap.

Bible & Science is an interdenominational Christian group in the City of Worcester aimed at promoting intelligent debate about faith in a scientific context.

The Organisation Team are Professor Geoff Pritchard, Richard and Purvi Wood, Ann and Graham Coyle and Dr Kim Stansfield.

These meetings are for anyone wanting to make sense of this changing world, especially those interested in how scientific advances might impact on religious beliefs. They are not restricted to scientists or graduates.

Speakers are requested to stop every 15 minutes and discuss with the audience what has been said so far. (The proceedings end at 9:30 pm with refreshments).

Programme 2010-11

**Meetings will be held on the third Tuesday in the month. 8.00 pm
Lindisfarne House, 4 Barbourne Terrace, Worcester, WR1 3JS.**

2010
